

Learning

Students are required to identify the following components of the system:

1. IDENTIFY THE MAIN PARTS OF THE SYSTEM

1.1. The main parts of the system are the input, the processing unit, the output, and the feedback loop.

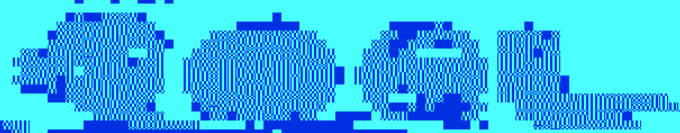

1.2. The input is the information that is fed into the system.

1.3. The processing unit is the part of the system that takes the input and produces the output.

2. DESCRIBE THE FUNCTION OF EACH PART

2.1. The input is the information that is fed into the system.

2.2. The processing unit is the part of the system that takes the input and produces the output.

The input is the information that is fed into the system.

The processing unit is the part of the system that takes the input and produces the output.

The output is the information that is produced by the system.
